Other Site Characteristics

Pequeño espacio de relieves suaves, que forma parte de las sierras que cierran la baja plana de la Depresión central occidental catalana. El espacio acoge algunos elementos propios de quejigares dentro del país de la carrasca, con pinares de pino blanco y matorrales calcícolas de romero y brezo blanco (*Erica arborea*).

4.2 Quality and importance

El interés de las umbrías del río Corb radica en que representa una de las localizaciones más extremas y meridionales de los robledales submediterráneos de quejigo (*Quercus faginea*) que penetran en este territorio a través de la meseta segárrica. La presencia de elementos submediterráneos y euro-siberianos dentro un país eminentemente seco y continental constituye por si misma una notable singularidad botánica. Presencia de *Melampyrum cristatum*.
